

1<sup>st</sup> Volume Why the weather has gone crazy?  
by Lubor Zak, PhD.

English Abstract

Multi- dimensional solar system, macro and micro worm holes, law of resonance, use of archetype, changes in weather, reasons of severe weather, drought, devastating wildfire, inner human biofields, reasons for volcanic eruption, earthquake, hurricane, extreme weather events, heat waves, cold outbreaks, floods, water shortages, wind storms, heavy rain storms, freezes, regional events, vehicle accidents, mind quality, atheistic scientists, faith, diseases of civilization, rheumatism, headaches, depression, encephalopathy.

This work is a sketch, which gives new revolutionary view to span science, religion and culture and introduces a scientific explanation for unavoidable dangers of severe weather changes. It describes particular dimensions and subdimensions among Earth and the Sun, which were defined by Adelma von Vay (1840-1925). Adelma von Vay wrote the first true theory of cosmology that was anchored solidly in a framework of Christian religion and quantum physics at macroscopic scales, which brings explanations for many biological and physical phenomena... There are seven dimensions in our Solar system and every dimension has seven sub-dimensions. Main influence on weather and climate of our dimension is from lower three dimensions, which are described in the study.

Each subdimension has very special energy of the biofield corresponding to a mental and disease condition of human biofields and different weather conditions, too.

A devastating energy e.g. frequencies and powers of hurricanes or droughts or wildfires etc. is produced when thousands of people are watching any horror or other Bacchanal "culture" product.

The energy transportation of weather events or other problems is created when the accumulated strong biofield of many people of our dimension is connected with the corresponding outer biofield dimension by application of Law of Resonance .

Various extreme weather events, slumps, earthquakes, strange vehicle accidents, diseases, etc. are channeled through worm holes to local regions of our world.

This study describes proofs of geopolitical data by specific historic events in USA, Europe or other parts of the world. It introduces not only reasons by the particular dimension but some ways of prophylaxis and reparation, too.

The introductory study appeals to provide large scientific research to find new relations and to confirm all important factors by statistics to prevent disasters.
